

# ScrAp Knights MAchinA Deus

A game by Draner of Lytel Saffron. v b.0.1

|                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Objective</b>     | Defeat the opposing mech using your hand made mech.                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>Materials</b>     | 9d6, two note cards, two writing implements, and two mech decks. Certain decks may require additional components.                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>How To Play</b>   | Each player has 12 HP (represented by 2d6). Players will choose an ACT card from their deck, and then each turn their card face up. Players can respond with BOTs and Trigger ULTS. First to reduce the opposition to 0 HP wins.                                                                                                                                                                                                                                                                     |
| <b>General Rules</b> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>Mech Deck</b>     | A Mech Deck consists of 3 parts: 6 ACTs, 1 ULT, and 3 BOTs. The ULT and BOT cards should be set in front of the player for all to see, while the ACT cards remain hidden in hand.                                                                                                                                                                                                                                                                                                                    |
| <b>Phases</b>        | There are three phases to the game: <b>The act phase, the flip phase, and the resolution phase.</b><br>During the act phase, each player chooses an act card and sets it in front of them face down. During the flip phase, these cards are then flipped over and players may respond with their BOTs. Once BOTs are decided, the resolution phase begins and effects are added to the chain, resolving in priority order. At the end of the resolution phase, players with 0 HP lose the game.      |
| <b>ACTs</b>          | ACTs are the main maneuvers your mech can execute. After being used, they return to your hand. Each act has a subtype; Attack, Defend, Movement, or Special                                                                                                                                                                                                                                                                                                                                          |
| <b>ULTs</b>          | ULTs are your mech's signature moves. All ULTs have a link condition, and gain a link token when it's met. At the end of a flip phase, if the ult has three or more link tokens, its effect is added to the chain and its link resets, removing all counters.                                                                                                                                                                                                                                        |
| <b>BOTs</b>          | BOTs are little drones that help you gain advantages and evade doom. When they're used, they are discarded. They can only be activated under certain trigger conditions. BOTs look to see if their conditions would be triggered <i>before</i> they happen, enabling them to prevent the outcomes that trigger them. Explanations of these triggers can be found in the keyword section.                                                                                                             |
| <b>Mechanics</b>     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>Heat</b>          | Most acts give you heat. At the start of the act phase, players with 7 or more heat lose the game.                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>Distance</b>      | Distance is a value from 0 to 5. If it would go beyond 5, it stays at 5 as you hit the boundary of the battlefield. If it would go below 0, the absolute value is taken as you cross over where your opponent currently is. <b>Distance starts at 1.</b>                                                                                                                                                                                                                                             |
| <b>Priority</b>      | Effects happen in priority order. The higher the priority value, the sooner it happens in the chain. If two effects share the same priority, their card type can be used to determine what happens first. They resolve in the following order based on type and subtype: BOTs, ULTs, Defend ACTs, Attack ACTs, Movement ACTs, Special ACTs. If two effects have the same priority and the same (sub)type, but there is relevance to what resolves first, randomly decide which effect happens first. |

|                         |                                                                                                                                                                                                                                                                                                              |
|-------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Priority (cont.)</b> | There are three special priorities; Priority First effects happen before all other effects, Priority Last effects happen after all other effects, and Priority Tag effects always happen immediately after the effect that triggered it.<br>After an effect is resolved, it is removed from the chain.       |
| <b>Damage</b>           | Damage causes loss of HP.                                                                                                                                                                                                                                                                                    |
| <b>Discard</b>          | Cards such as BOTs that are discarded cannot be used again for the remainder of the round. If you cannot play any cards, you must pass the turn without action.                                                                                                                                              |
| <b>Keywords</b>         |                                                                                                                                                                                                                                                                                                              |
| <b>Range</b>            | Some ACTs and ULTs have a range value. If the current distance is greater than the card's range, the card does nothing.                                                                                                                                                                                      |
| <b>Block</b>            | When you block, reduce the total damage dealt in that effect's priority as you choose                                                                                                                                                                                                                        |
| <b>Gain</b>             | When you gain something, you gain a token of the specified type. Tokens can be spent for their effects at the end of the flip phase. See the token sheet for their specific effects.                                                                                                                         |
| <b>On hit</b>           | On hit effects happen if the attack's damage is not reduced to 0 or less by blocking.                                                                                                                                                                                                                        |
| <b>SECRET</b>           | If an effect has a SECRET, you must secretly resolve its SECRET before the flip phase by writing that decision down on a note card. Secret decisions are revealed before cards are flipped during the flip phase.                                                                                            |
| <b>OVERCHARGE</b>       | If an ACT has OVERCHARGE n, you must secretly decide whether or not you overcharge it before the flip phase. If you overcharge it, it gains the effects below OVERCHARGE n and its heat is increased by n. Secret decisions are revealed before cards are flipped during the flip phase.                     |
| <b>Uninterrupted</b>    | If a trigger condition checks if a player would be uninterrupted, it checks if that player would take no damage before that effect is executed.                                                                                                                                                              |
| <b>Threatened</b>       | If a trigger condition checks if a player would be threatened, it checks if that player would be dealt damage this turn.                                                                                                                                                                                     |
| <b>Move</b>             | When you move n, increase or decrease distance by n. If you move forward n, always decrease. If you move back n, always increase. You must secretly choose whether to increase or decrease the distance before the flip phase. Secret decisions are revealed before cards are flipped during the flip phase. |
| <b>Miss</b>             | If a trigger condition checks if a player would miss, it checks if that player would have an effect with range resolve this turn when distance is greater than range.                                                                                                                                        |
| <b>Overheat</b>         | If a trigger condition checks if a player would overheat, it checks if that player would have 7 or more heat at the end of resolution.                                                                                                                                                                       |
| <b>Unique</b>           | If an ULT's link looks for a unique ACT, its link is met if you use an ACT you haven't used since it last triggered.                                                                                                                                                                                         |
| <b>Vent</b>             | When you vent n, reduce your heat by n.                                                                                                                                                                                                                                                                      |
| <b>YOU: &amp; OPP:</b>  | If a trigger condition has YOU: before it, it cares if the trigger is happening to you. If it has OPP: before it, it cares if it's happening to the opponent.                                                                                                                                                |
| <b>Tokens</b>           |                                                                                                                                                                                                                                                                                                              |
| <b>Frame Advantage</b>  | Give your next ACT +1 priority to all effects.                                                                                                                                                                                                                                                               |
| <b>Armored</b>          | Give your next ACT "Block 2." on all effects.                                                                                                                                                                                                                                                                |
| <b>Blitz</b>            | Give your next Attack +1 heat and +2 to all damage.                                                                                                                                                                                                                                                          |
